

Renewable energy biomass

Facts

Biomass is an old energy source

Biomass energy has been around for 1.5 million years

Biomass is organic

what is renewable energy?

1

Renewable energy means energy that is completely natural and will never run out. It is important because it won't harm animals and is a reusable and continuing source of energy.

What is biomass energy?

2

Biomass Energy is when energy comes from plants. The plants energy is a continuous source.

What is bio mass energy produced by?

3

Biomass energy is produced by plants/nature. It is not produced by fossil fuels. We get biomass by burning plants which is air pollution. Some other types of biomass are wood, crops, garbage, landfill gas and alcohol fuels.

Why is biomass energy sustainable?

4

Bio mass energy is sustainable because it is produced by plants and not by oil, gas or coal.
