

WIND ENERGY

By Ammara

RENEWABLE ENERGY

Renewable energy is energy that can be used for over a lifetime or is limitless.

IS RENEWABLE ENERGY IMPORTANT?

Yes! Renewable energy is very important to our ecosystem. Example when we use renewable energy we have an endless supply, without this type of energy we have to use coal or oil. This is bad for our environment.

HOW IS IT PRODUCED?

Wind energy is produced when wind turns a wind turbine, making energy! This goes in an endless cycle of energy.

WHY IS IT SUSTAINABLE?

Wind energy is sustainable because it does not use non-reusable energy like coal or oil. Wind power also creates a better ecosystem.
